

Global Format Registry Use Case: BNF-2

Use Case ID	BnF-2
Description	Collection Audit
Actors	Repository administrators
Assumptions	
Preconditions	An existing collection or a new collection need to be evaluated as a whole for instance in case of a all-or-nothing ingest process or in case of global budget planning.
Triggers	The registry gets custody of a new collection or business rules applied to an existing collection change.
Primary Scenario	Step 1 The list of all digital formats of the collection is extracted with associated numbers of files and size.
	Step 2 The list is submitted to the registry to obtain information on theses formats. The combination of the two gives an integrated overview of risk associated with the collection.
Primary Result	Information for decision making process is provided.
Post-Conditions	
Non-functional requirements	
Notes	The audit can be based on general risk evaluation provided by the registry or can be more refined and include a specific set of rules applied to the information provided by the registry for specific assessment of the collection.
